

Inspire the next generation of engineers.

The Engineer-in-Residence (EIR) Program is PEO's flagship educational outreach program. It matches P.Eng.s and EITs with a high school or elementary school in their community to ignite excitement for STEM topics in the classroom! There is no cost to participate and all training and materials are provided and harmonized with the curriculum requirements for your students' grade level.

"Students have access to learning opportunities and career exploration that I am not qualified to deliver. There would be no other way for them to receive this level of programming in the fields addressed."

Grade 8 Teacher, Sudbury

"Having a motivated EIR allows my students to become more aware of STEM education in an energized team teaching environment."

Grade 7 Teacher, Ottawa

"My experienced engineer was able to impart interesting details about his career field that I could not have and added another level of knowledge and experience to the hands-on activities."

Grade 9-12 Careers and Technology Teacher, Sarnia

"It's wonderful to have someone from the community visit the children and help give them another perspective."

Grade 1 Teacher, Richmond Hill

Now accepting applications for the upcoming school year.
